

VetBattleBuddy.ai

Veteran Claim Readiness & Decision Support Platform

Evidence Before Conclusions. Trust Before Intelligence.

VetBattleBuddy.ai is a Veteran-focused technology platform designed to help Veterans, caregivers, advocates, Veteran Service Organizations (VSOs), Tribal organizations, and government stakeholders improve claim readiness, evidence organization, and informed decision-making throughout the benefits journey. The platform delivers secure, explainable, and human-centered decision support that helps users better understand documentation needs, identify potential evidence gaps, and organize information for review before submission. VetBattleBuddy.ai is designed to complement existing human workflows and professional judgment, not replace them.

Core capabilities

Claim Readiness Support: Educational guidance and readiness assessments that help users understand documentation requirements, evidence completeness, and preparation activities before benefit submissions.

<https://www.vetbattlebuddy.ai/claim-readiness>

Evidence Organization: Helps users organize supporting information, records, and documentation in a structured, review-friendly format designed to improve clarity and preparation efficiency.

<https://www.vetbattlebuddy.ai/demo>

Explainable Decision Support: Transparent guidance designed to help users understand next steps while maintaining human oversight and review. Outputs are educational. They are not official determinations.

<https://www.vetbattlebuddy.ai/faq>

Human-in-the-Loop Workflows: Supports Veterans, caregivers, advocates, clinicians, and accredited representatives through collaborative workflows that keep human review and decision authority in place.

<https://www.vetbattlebuddy.ai/government>

Auditability & Trust: Designed around accountability, consent awareness, explanation, and traceability to support responsible use in highly regulated environments.

<https://www.vetbattlebuddy.ai/privacy>

VSO & Organizational Support: Workflow assistance and operational visibility intended to help organizations support Veterans more efficiently while preserving professional oversight and established processes.

Who we serve

Veterans; Veteran families and caregivers; Veteran Service Organizations; Tribal organizations; Claims-support teams; Clinical support professionals; Government pilot and evaluation teams; Veteran-focused nonprofit organizations

Differentiators

Veteran-First Design: Purpose-built around Veteran needs, claim readiness, evidence preparation, and user guidance rather than generic AI assistance.

Explainability & Transparency: Understandable outputs designed to support trust, accountability, and informed decision-making.

Human Oversight: Workflows support human review and judgment rather than autonomous benefit decisions or adjudication.

Responsible AI Principles: Explainability, accountability, privacy awareness, auditability, and consent-based operation.

Mission

To empower Veterans and those who support them with trusted tools that improve claim readiness, strengthen evidence preparation, and enhance understanding throughout the benefits journey.

Corporate statement

VetBattleBuddy.ai is a Veteran-focused technology company developing secure, explainable, and human-centered decision-support solutions that help improve claim readiness, evidence preparation, workflow efficiency, and user understanding while preserving human oversight and established decision authority.

What we will not do

- File or prosecute a VA claim
- Estimate, predict, or assign a disability rating
- Replace an accredited VSO, claims agent, attorney, or clinician
- Replace the adjudicator or issue an official determination
- Operate as a crisis line â veterans in crisis should call or text 988, then press 1

90-day pilot

- 90-day bounded pilot
- Primary measures: Evidence First-Pass Yield, missing evidence detected pre-submission, retrieval time, avoidable development actions, evidence-related rework, traceability
- Governance measures: human override rate, unsupported-output rate
- Results published only when independently defensible
