

Vet Battle Buddy™ is an evidence-readiness company. Leigh Anne Bryson owns the Lean Six Sigma operating methodology. Tanner Tobey owns engineering, development, and security. The product is a redesigned evidence process — AI is the enabler, not the pitch.

Thesis

VA is getting faster. Claim complexity is still rising. The unfinished job is the quality of evidence entering adjudication.

VBB sells Evidence First-Pass Yield™: fewer avoidable defects before a file becomes workload.

Category is evidence orchestration, not claims filing and not generative guessing.

Team

Leigh Anne Bryson — Co-founder, Lean Six Sigma

Tanner Tobey — Co-founder, engineering, development, and security; disabled veteran

Tom Asbury — Voice of the Veteran

Jacob Stevens — Operations

90-day pilot

90-day bounded pilot with named KPIs

Primary: Evidence First-Pass Yield, missing evidence detected pre-submission, rework, traceability

Governance: human override rate, unsupported-output rate

No invented ROI on the public site; models belong in diligence when they can be substantiated

What we will not over-claim

File or prosecute VA claims

Predict or assign disability ratings

Describe FedRAMP alignment as an ATO

Describe HIPAA-ready controls as covered-entity certification

Publish unsubstantiated savings as company results

Government leave-behind: Capability statement at /capability-statement

Not a claims mill. Not generative guessing. Humans stay in command. Alignment language is not certification. vetbattlebuddy.ai
